Control Handles

VER. 12/12

Knight offers three types of control handles: electric, pneumatic or electric/pneumatic combinations. The control handle series are designed to ensure an ergonomically correct position for the operator. Control handle levers are marked according to customer specifications and can be customized to fit each applications need.

Levers can be customized with stamped callouts for identification and ease of use. Callouts are available in different languages. Angled levers are used for optimum ergonomics. Up (Green) and Down (Red) levers are standard colors. Custom colors can be applied according to customer specification. Control Handle Trigger levers can be mounted on the back of the handle for optimum ergonomics or as a fifth button.
